

# TMS OnLine

*the flexible solution for CMMS*

### CENTRALIZE DATA

Consolidate data in one central database with segments to keep department-specific data like assets and work orders separate.

### INCREASE PRODUCTIVITY

Improve your ability to plan, estimate and schedule. Use TMS mobile solutions to keep your technicians in the field to maintain productivity.

### IMPROVE REPORTING

Gain insight into the performance of your critical assets and facility with more than 250 standard reports built into TMS OnLine.

### REDUCE EQUIPMENT DOWNTIME

Manage your preventive maintenance to decrease downtime of critical assets, eliminating the need for last-minute rentals.

### SCALE ACROSS YOUR ORGANIZATION

Grow technology use across your organization via segments to extend to environmental services, information technology and dietary and transport.

### COMPLY WITH REGULATORY REQUIREMENTS

Meet reporting requirements set by organizations like Joint Commission, OSHA, EPA and ADA with easy-to-access data in one system.

## WORK ORDERS, PREVENTIVE MAINTENANCE & PLANNED EVENTS

- Create, edit, assign and schedule work orders for corrective maintenance
- Generate preventive maintenance based on meters like hours, gallons or calendar-based schedules
- Use inspections to conduct procedures on specific equipment or areas, such as EOC or to assess safety
- Schedule all your events such as training sessions, meetings, fire drills, rounds and other recurring event
- Build a library of reusable, standardized procedures for your work orders, PMs and planned events, organized by type and skill with estimated completion times for forecasting
- Track resource use, including personnel, time and materials, to gauge overall productivity and costs

## ASSET TRACKING AND MANAGEMENT

- Record warranty information, repair costs, maintenance history, PMs and materials used for each asset
- Group like assets, such as fire extinguishers, to reduce paperwork and still maintain individual asset histories
- Search, classify and tag equipment based on ECRI's Institute's Universal Medical Device Nomenclature System and Sourcebase codes with an ECRI Institute's subscription

## MATERIALS AND PARTS

- Manage your stocked and non-stocked items used by your maintenance operation
- Generate transactions of issuing, receiving, transferring and counting material items to keep your warehouse accurate and organized
- Access the eParts Finder portal to search, review and purchase replacement parts and leverage key data points like average cost and manufacturer cost for reporting and analysis

## RISK ASSESSMENT

- Create strategies for utility equipment and biomedical equipment
- Leverage TMS to store your management plans
- Define the strategy, categories, values for each and the equation to calculate the risk number

## REPORTING

- Leverage more than 250 reports to gain insights into real-time data to enable decision-making
- Transform your data into information to manage your business and ease compliance with regulatory agencies
- Use four types of reporting standard in TMS, including Quick Reports, Advanced Reports, Designer Reports and Email Reports
- Simplify reporting with our WYSIWYG tool, which makes it quick and easy for everyone

TMS OnLine is the flexible choice for computerized maintenance management systems (CMMS) that enables technicians to track asset data and manage vital information for biomedical and facility management activities.
