

EMBRACE THE DATA-DRIVEN, SMART CAMPUS

USE INTERNET OF THINGS TECHNOLOGY TO BRING TOGETHER FACILITIES, ASSETS, AND PERFORMANCE

College campus buildings along with lighting, HVAC/R systems, and laboratory equipment are generally considered pure cost centers. With Internet of Things technology, these systems have evolved into data resource centers with collected business intelligence.

Now, equipment can be utilized to provide a constant data stream of performance, energy consumption, fault and error codes, and other types of telemetry data.

- Reduce Operation Costs
- Increase Asset Life
- Encourage Sustainability
- Improve Campus Facilities

The Internet of Things isn't just about collecting data. It's about what you can do with the data and how much you can automate the data-analysis for your campus operations.
