

FAMIS Mobile App

INCREASE MAINTENANCE EFFICIENCY

Let your technicians focus on facilities maintenance instead of your CMMS

SIMPLIFY MAINTENANCE MANAGEMENT

Access and update work orders from the field, including asset details, uploading photos, and recording comments.

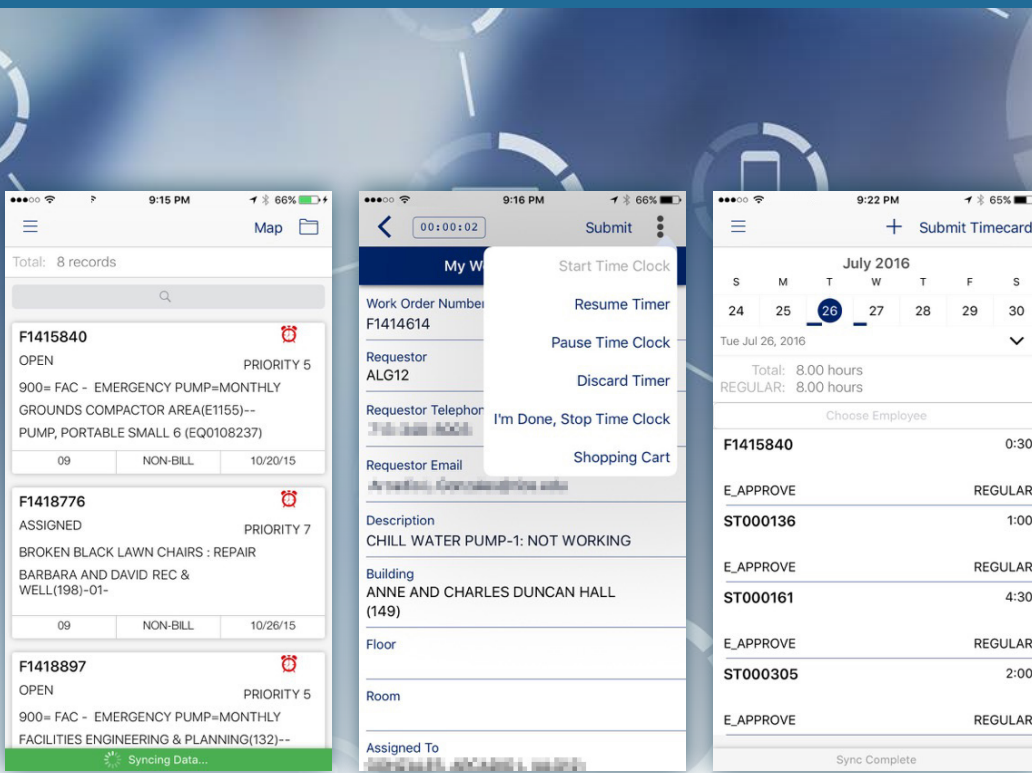

ENHANCE VISIBILITY

Make your maintenance data real-time to increase customer satisfaction and make faster decisions

TRANSFORM OPERATIONS

Fully equip mobile users by configuring workflows and forms and integrating with other applications

THE FAMIS MOBILE APP HELPS YOUR TEAM:

- Leverage existing user security to minimize administration needs
- Update status and assignment details to keep work moving forward
- Post labor entries with a built-in timer to increase time tracking accuracy
- Make full work procedures available to empower field staff
- Take, attach, and mark-up photos to improve documentation and communication
- Request materials or post parts directly to optimize item utilization
- Link other applications to expand integration capabilities
- Configure the application to meet your unique needs and maximize user adoption

IMPACT ON CURRENT FAMIS FUNCTIONALITY:

FAMIS Mobile enhances the capabilities of FAMIS. The mobile app serves as an additional resource for engineers, technicians, vendors and facility managers to work more efficiently in the field. Printing thousands of paper work orders each year and unnecessary return trips to work control or remote terminals will no longer be required.

About FAMIS

FAMIS is designed to provide your organization with the facility management solutions you need to manage the complete facilities lifecycle — from real estate acquisitions to project management, operations, maintenance, facilities management, asset management, inventory control and space management. Since 1982, FAMIS technology has stood out as a leader in providing robust facilities management software developed specifically for education and public sector.
