

Interim Life Safety Measures Report

REPORT DESCRIPTION

This report provides a summary of ILSM discrepancies discovered during rounds and what actions were taken to address and correct each item.

This is not a standard report included within TMS OnSite/TMS OnLine. It can be developed using the C1 Report Designer software provided by Four Rivers Software should you have the resource to do so. Additional documentation to guide you through the development of the report will be provided upon request. If you would like modifications to the report as shown, a report creation request may be submitted to our Services Department via techsupport@frsoft.com for creation and delivery to you. This report uses parent/child relationships to represent the ILSM needs of a project. The Parent Work Order is the project record, and child work orders are various ILSM records for that project.

INFORMATION IN USE

- Parent Work Order Number = Project Number
- Parent Work Order Description = Project Description
- Parent Work Order Date Available = Project Start Date
- Parent Work Order Date Needed = Project Completion Date
- Parent Work Order Week Scheduled as PICRA Completed
- Child Work Order Type Code = IL (Interim Life Safety)
- Child Work Order Description = Criteria
- Child Work Order Requester Remarks = Deficiency
- Child Work Order Date Created = Date Found
- Child Work Order Cause Code = ILSM # (Cause Codes start with ILSM: i.e: ILSM01, ILSM02, etc.)
- Child Work Order Completion Comments = Comment
- Child Work Order Assignment = Inspector

REFERENCE ITEMS

- Clear descriptions must be used
- Appropriate custom fields must be created
- Concise completion notes must be entered

IMPORTANT NOTE

Correct creation and use of custom fields is a must.
