Reduce maintenance delays to
improve customer experience

Prevent on-site design mistakes
and maintenance hazards

Optimize asset management
and extend asset longevity

The lack of information puts your customer experience at risk with the potential for worker injuries and work order delays. By having a single source of truth for all engineering documentation, retailers removes silos between engineering and maintenance teams, facilitating tasks like finding maintenance manuals and inspection reports, and avoiding non-compliant sites and on-site accidents.

AVOID ERRORS THAT IMPACT CUSTOMER EXPERIENCE

- Avoid on-site delays that directly impact your customer experience on-site
- Prevent costly errors and accidents due to lack of information
- Ensure safety of field technicians with 24/7 access to up-to-date engineering information

ENHANCE COMMUNICATION BETWEEN TEAMS

- Reduces time spent searching for engineering information from hours to minutes
- Provides a single source of engineering documentation for both engineers and field technicians
- Markup engineering drawings for comments and edits

“The efficiency of both the Maintenance and Engineering processes has been improved. All our assets are maintained and the documents are directly available from Meridian to keep a real-time relationship.”

– René Baron, Maintenance and Engineering Manager, BASF

REDUCE DELAYS WITH ACCESS TO KEY DOCUMENTS

- Avoid loss of key information that can cause on-site work order delays
- Search, view, and download documents for asset service with one click
- View documents, including maintenance manuals, inspection reports, and P&IDs (Process and Instrumentation Drawings)

STREAMLINE MAINTENANCE FOR BETTER IN-STORE EXPERIENCE

- Make changes to any key documents and see automatic updates across the system
- Keep communication open between engineering and field technicians
- Avoid slowdowns on major projects that can cause issues at stores
