

# Plan for Improvement Report

## REPORT DESCRIPTION

---

The report provides the current status of EOC discrepancies found during inspection rounds. The information presented is all from the established work order to assess the discrepancy.

This is not a standard report included within TMS OnSite/TMS OnLine. It can be developed using the C1 Report Designer software provided by Four Rivers Software should you have the resource to do so. Additional documentation to guide you through the development of the report will be provided upon request. If you would like modifications to the report as shown, a report creation request may be submitted to our Services Department via [techsupport@frsoft.com](mailto:techsupport@frsoft.com) for creation and delivery to you. The below listed fields are all standard fields used within TMS.
