

UNDER ARMOUR  ServiceChannel™

ATHLETIC APPAREL RETAIL CHAIN FACILITIES MANAGEMENT TEAM ACHIEVES ‘FULL CIRCLE ACCOUNTABILITY’ WITH VENDORS NATIONWIDE

THE COMPANY

Under Armour (NYSE:UA, UA.C), the innovator of performance footwear, apparel and equipment, revolutionised how athletes across the world dress. Designed to enhance the performance of all athletes, the brand’s innovative products are sold worldwide to athletes at all levels, including at 168 owned & operated stores in North America.

“We know exactly where we stand with every vendor, which helps us make them more accountable using hard data that we can generate anytime. This full-circle accountability has made everyone better.”

– Kim Bowling, Senior Manager Global Store Development

**DECREASE IN AVERAGE WORK
ORDER RESOLUTION TIME**

THE CHALLENGE

Before deploying ServiceChannel, Under Armour's facilities management process was largely a "pen-and-paper" operation, creating significant issues for the 2-person FM team responsible for the owned & operated stores in North America. These included:

- Limited visibility into or systematic way to track/monitor store issues
- Inability to prioritise open work orders according to urgency or other criteria
- Limited use of key performance indicators to improve operations beyond achieving "positive customer experience"
- Legacy invoicing and payment process, leading to errors and delays in payment to vendors
- Preventative Maintenance vs Demand Maintenance

"Using ServiceChannel, we get time back in our day because the system basically manages itself. It has given us the ability to prioritise, track everything and be more efficient overall. Using the system to our advantage and to our specifications has been a huge help and has changed our world."

– Kim Bowling, Senior Manager Global Store Development

THE SOLUTION

ServiceChannel's software solution has been in place at Under Armour for more than five years, starting with a deployment of 35 stores to a full deployment across all company-owned & operated locations in North America. Under Armour primarily relies on the following ServiceChannel solutions:

- Service Automation to provide a comprehensive facilities management system with full transparency
- Invoice Manager to reduce invoice and payment processing costs while reducing invoice approval time
- Planned Maintenance Manager to ensure scheduled services like HVAC, cleaning and Fire/Life/Safety inspections occur as needed
- Analytics Custom to generate full programmed visibility and actionable data-generated insights across locations and vendors
- Compliance Manager to efficiently track vendor certificates of insurance and get alerts on upcoming expirations
- Mobile App to let stores manage tickets from 'open to close,' regardless of location

THE BENEFITS

Using ServiceChannel's solution has enabled the Under Armour FM team to be a highly efficient, disciplined and data-driven organisation. In addition to saving time and money, implementing ServiceChannel has given the company greater visibility through real-time tracking and dramatically improved the business relationship between the FM team and its nationwide network of vendors by:

- Enabling both stores and the FM team to know what's happening at any given time, and have data to refer to and use in the future
- Generating data-based reports and scorecards that serve as the basis for "vendor summits"
- Creating updateable vendor scorecards tracking KPIs such as on-time check-in rate; number of work orders year-over-year; frequently recurring issues by store, trade, etc.
- Auto processing of invoices according to established policy and not-to-exceed (NTE) cost boundaries to save time and limit manual intervention
- Receiving timely alerts of vendor compliance issues such as expiring insurance certificates

THE RESULT

In general, the Under Armour FM team has gained the ability to understand what's going on with its operations in real-time, as well as a history of data to refer to and use in the future for enhanced planning, budgeting and forecasting. Some specific quantifiable benefits that the team has been able to measure and track include:

- Decreasing average invoice amount by 20%
- Reducing average invoice approval time by 83%
- Shortening average work order resolution time by 16%
- Increasing first-time completion rate of work orders by 52%
- Improving vendor check-in rates by 26%
